  - ◆ **Deploying Web Apps on [Heroku](#)**

# Setting Up MongoDB Atlas

- ◆ Sign up for a MongoDB Atlas account :

<https://www.mongodb.com/try>

The screenshot shows the MongoDB Atlas sign-up form. It includes several input fields: 'Your Company (optional)', 'How are you using MongoDB?' (with a dropdown menu showing 'I'm learning MongoDB'), 'Your Work Email' (with the email 'ekryu@knu.ac.kr'), 'First Name' (with 'EUNKYUNG'), 'Last Name' (with 'RYU'), and 'Password' (with masked characters). Below the password field, there is a green checkmark and the text '8 characters minimum'. A checkbox is checked, and the text 'I agree to the terms of service and privacy policy.' is displayed. At the bottom, there is a green button labeled 'Get started free' and a link 'Already have an account? Sign in.'

Your Company (optional)

How are you using MongoDB? —  
I'm learning MongoDB ✓

Your Work Email —  
ekryu@knu.ac.kr

First Name —  
EUNKYUNG

Last Name —  
RYU

Password —

# Deploying Web Apps on Heroku

## ◆ Sign up for a Heroku account

## ♦ 2. Install the Heroku CLI :

> **npm install -g heroku**

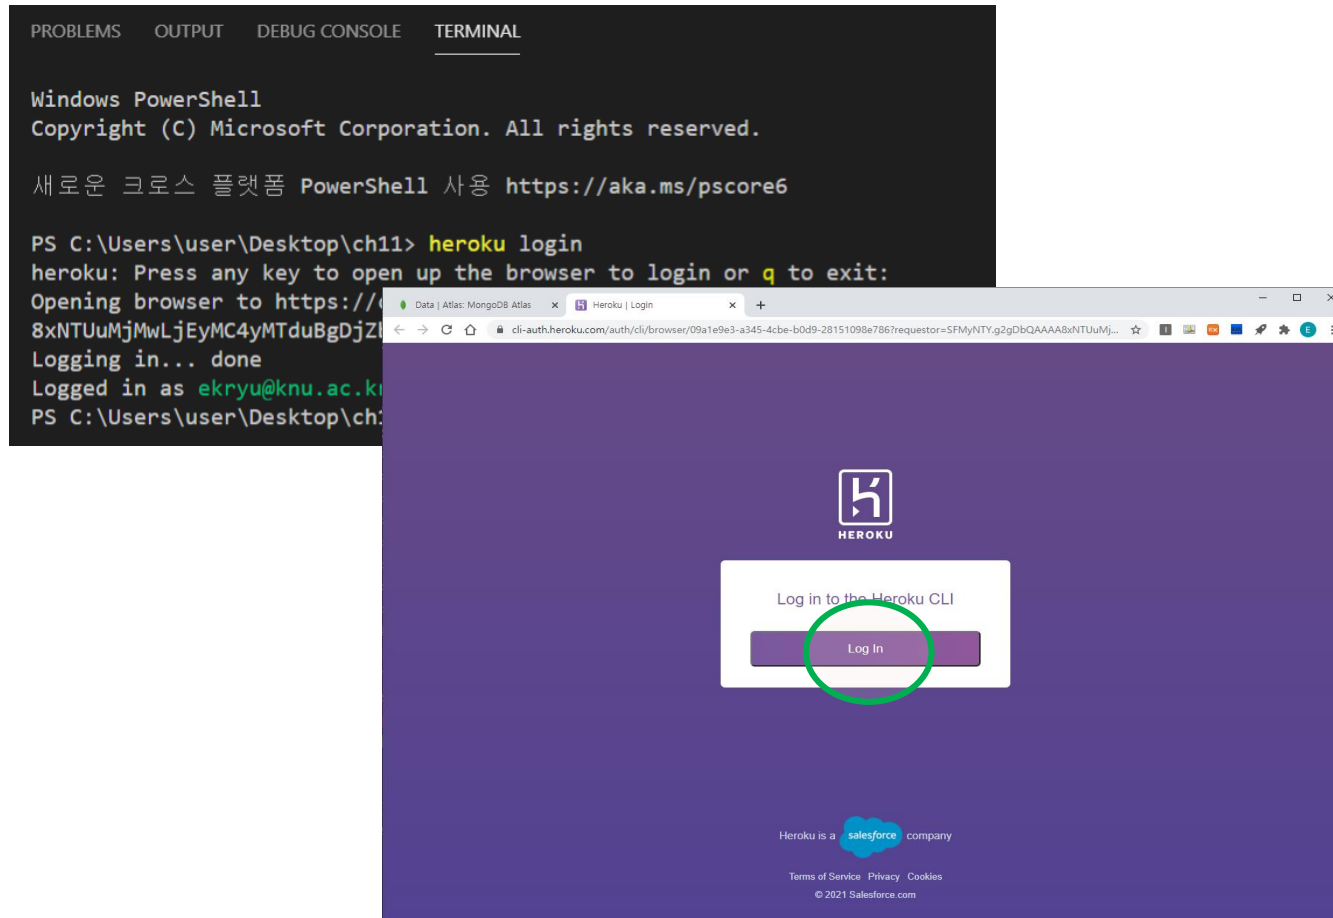

A screenshot of a terminal window from Visual Studio Code. The terminal has tabs for 'PROBLEMS', 'OUTPUT', 'DEBUG CONSOLE', and 'TERMINAL', with 'TERMINAL' being the active tab. The prompt is 'PS C:\Users\user\Desktop\ch11>'. The command 'heroku --version' has been entered and executed. The output is 'heroku/7.50.0 win32-x64 node-v14.15.4'. The prompt is now 'PS C:\Users\user\Desktop\ch11>' with a cursor.

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL

PS C:\Users\user\Desktop\ch11> heroku --version
heroku/7.50.0 win32-x64 node-v14.15.4
PS C:\Users\user\Desktop\ch11> 
```

## ◆ > heroku login    command 나 git bash 인지 확인

# Making our App 'Heroku Ready'

---

- ◆ **Adding a Procfile**
- ◆ **Adding our Node.js version to Package.json**
- ◆ **Listening on the correct port**
- ◆ **Specify the .gitignore file**

◆ In our app directory, create a file named **Profile**

- Copy the below line into :  
**web: node app.js** ( web: node index.js )
- This file will be run when Heroku starts our app

◆ **Package.json**

```
...  
  "license": "MIT",  
  "engines": {  
    "node": "10.15.3"  
  },  
  "author": "Start Bootstrap",  
  "contributors": [  
    "David Miller (http://davidmiller.io/)"  
  ],  
  ...
```

## ◆ Listening on the Connect Port

- Heroku sets up an environment variable `process.env.PORT` for the port

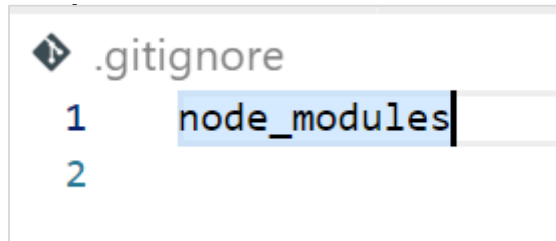

```
let port = process.env.PORT;
if (port == null || port == "") {
  port = 4000;
}

app.listen(port, ()=>{
  console.log('App listening...')
})
```

◆ **Create a file `.gitignore` in our app directory.**

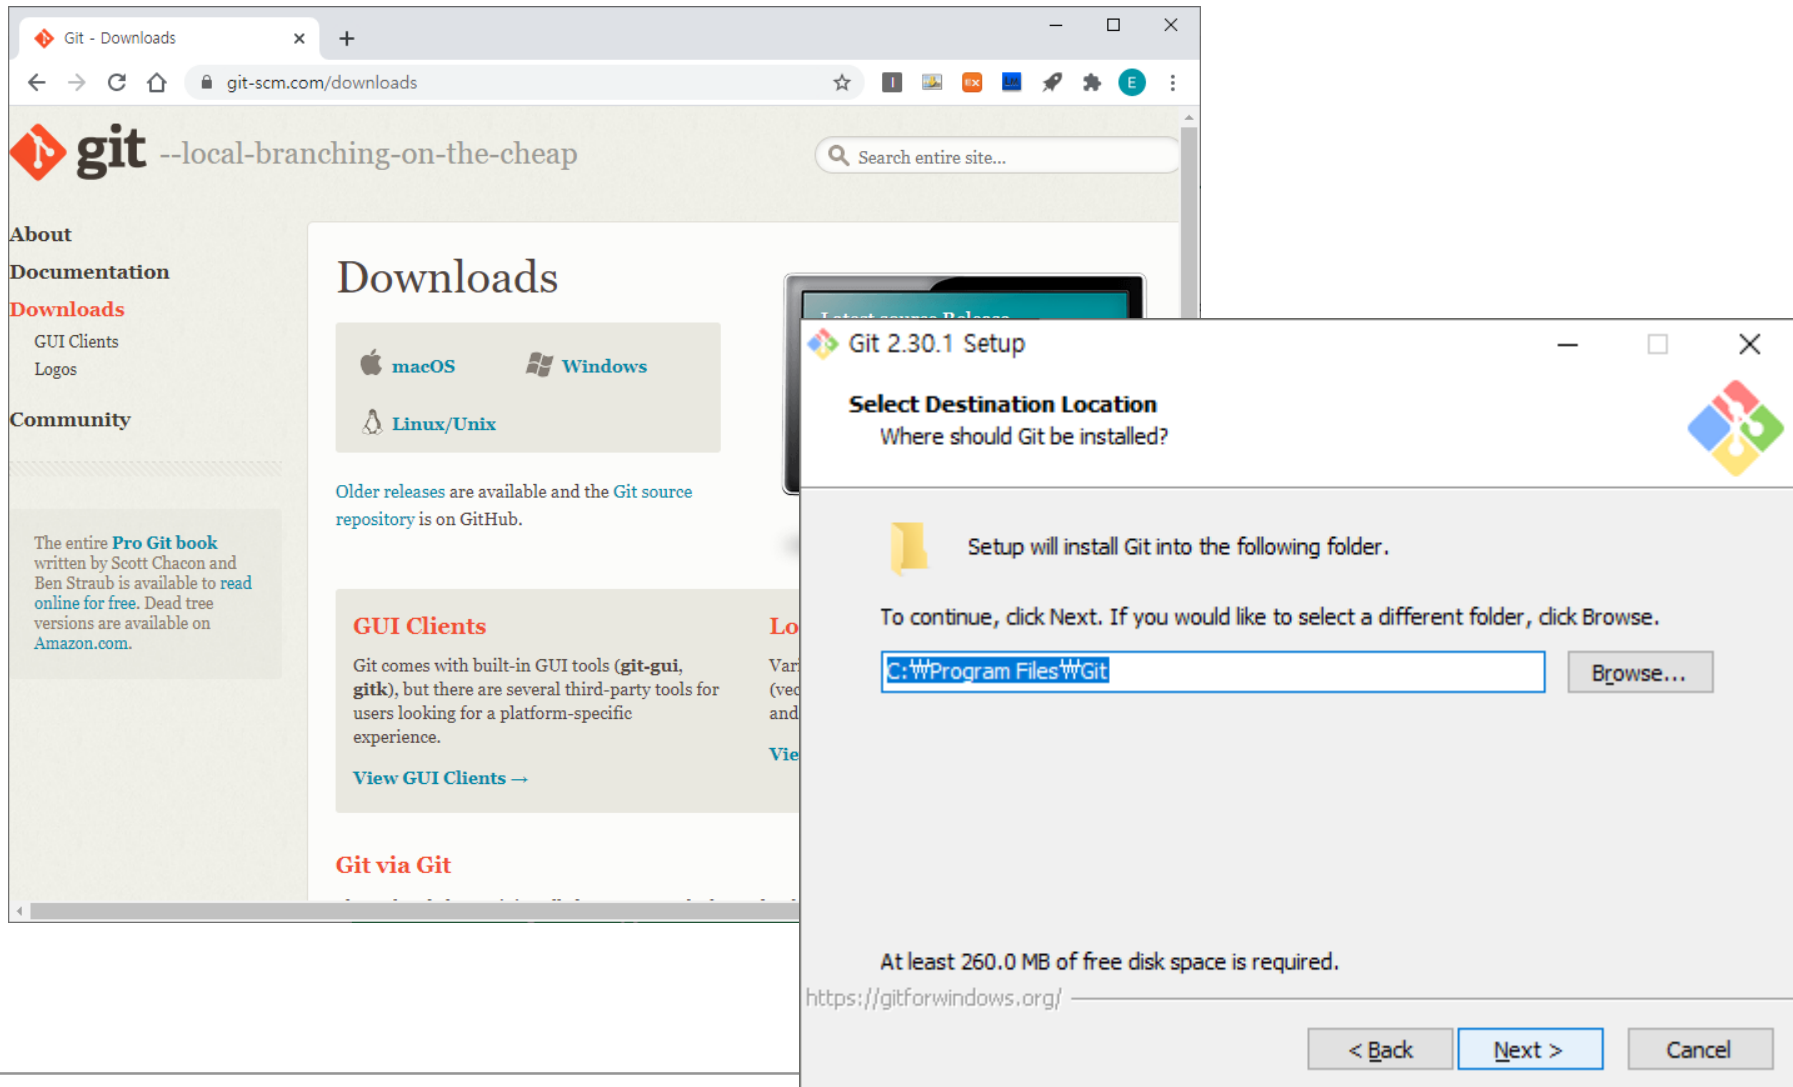

- This file tells Git to ignore whatever is specified in it from being pushed onto the server

```
.gitignore
1  node_modules
2
```

# Deployment

## ◆ Install git

PROBLEMS   OUTPUT   DEBUG CONSOLE   TERMINAL

```
PS C:\Users\user\Desktop\ch11> git --version  
git version 2.30.1.windows.1  
PS C:\Users\user\Desktop\ch11> █
```

는데, MSys 누르면 인스톨러로 Git을 Windows에 설치할 때 설정된다. **Git for Windows 2.x** 버전에서는 조금 다르다. Windows XP 사용자는 C:\Documents and Settings\All Users\Application Data\Git\config 디렉토리에서 찾을 수 있고 Windows Vista 이후 버전 사용자는 C:\ProgramData\Git\config 에서 찾을 수 있다. 이 시스템 설정 파일의 경로는 `git config -f <file>` 명령으로 변경할 수 있다. 관리자 권한이 필요하다.

### 사용자 정보

Git을 설치하고 나서 가장 먼저 해야 하는 것은 사용자이름과 이메일 주소를 설정하는 것이다. Git은 커밋 할 때마다 이 정보를 사용한다. 한 번 커밋한 후에는 정보를 변경할 수 없다.

```
$ git config --global user.name "John Doe"
$ git config --global user.email johndoe@example.com
```

다시 말하자면 `--global` 옵션으로 설정하는 것은 딱 한 번만 하면 된다. 해당 시스템에서 해당 사용자가 사용할 때는 이 정보를 사용한다. 만약 프로젝트마다 다른 이름과 이메일 주소를 사용하고 싶으면 `--global` 옵션을 빼고 명령을 실행한다.

GUI 도구들은 처음 실행할 때 이 설정을 묻는다.

### 편집기

사용자 정보를 설정하고 나면 Git에서 사용할 텍스트 편집기를 고른다. 기본적으로 Git은 시스템의 기본 편집기를 사용한다.

하지만, Emacs 같은 다른 텍스트 편집기를 사용할 수 있고 아래와 같이 실행하면 된다.

```
$ git config --global core.editor emacs
```

Windows 사용자라면 다른 텍스트 편집기를 사용할 수 있다. 실행파일의 전체 경로를 설정해주면 된다.

- ◆ > **git init**
- ◆ > **git add .**
- ◆ > **git commit -m "Initial commit"**
